Re: Beaver Water District – Improvements to the Joe M. Steele WTP

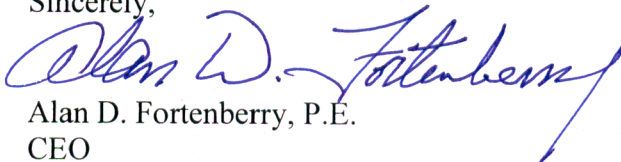

Dear Mark:

I would personally like to express my appreciation for the excellent job that Crossland Heavy did on the above referenced project. As you are aware this was the last project of our nearly 100 million dollar expansion, and was the smoothest running project of them all. This was demonstrated by your company when CHC finished the project nearly three months early. Your company's commitment to quality and cooperation is greatly appreciated.

A portion of this project included renovations to our existing Joe M. Steele WTP filters and operations building constructed in the early 1960's. As you know, with renovations unanticipated problems can occur. Your project team was very helpful in working with the design engineers and my staff in solving these problems. I would also like to thank your superintendent, Mike Kirk, and your onsite project manager, Dan Thompson, for doing an outstanding job; Mike and Dan's commitment to quality is refreshing.

At this time the Joe M. Steele WTP is running and providing quality drinking water to the people of Northwest Arkansas. Beaver Water District appreciates Crossland Heavy for providing us with a very successful project for the District and the people of Northwest Arkansas.

Sincerely,

Alan D. Fortenberry, P.E.  
CEO
